<p>Hepburn et al., 2016</p> <p>USA</p> <p>Quasi-experimental design</p>	<p>N= 33</p> <p>Families with children with ASD from rural and frontier communities in a western state</p> <p>Mean age: 11.82 ± 2.34 yrs</p> <p>Age range: 7-19 yrs</p> <p>17M:16F</p>	<p>Telehealth Facing Your Fears (FYF) (n=17)</p> <p>vs.</p> <p>Waitlist control (n=16)</p> <p>1 hour/session, 1 session per week for 10 weeks</p>	<p>I. Anxiety of youth with ASD, parent sense of competence</p> <p>II. FYF is usually given in a clinic or school but is given in a telehealth version in this study. Treatment is delivered in a small group format, comprised of four to six parent–youth dyads.</p> <p>Each session is supported by a chapter in a Facilitator’s Manual, a Parent’s Manual, and a Youth Workbook. The first six sessions focus on psychoeducational aspects of anxiety. The second six sessions build upon the psychoeducational curricula by promoting the development and implementation of youth-specific anxiety reduction strategies, with the goal of reducing the interference of anxiety and supporting the youth’s ability to cope with small amounts of physiological and cognitive distress.</p> <p>Modifications for youth with ASD are integrated throughout the FYF intervention and include provision of visual supports, predictable session routines, video modeling activities, and</p>	<p>Videoconferencing using Oovoo platform.</p>	<p><b>At post-treatment (3 months):</b></p> <p>(+) <i>Youth anxiety symptoms.</i> Screen for Anxiety and Related Emotional Disorders in Children - parent-reported</p> <p>Satisfaction: The mean Satisfaction score for youth was 88.8%. Younger children tended to report higher levels of enjoyment in the activities than most of the participating adolescents. When asked if they would recommend the program to a friend, 11 of 14 (79%) of participating youth said “yes.”</p> <p>Satisfaction: The mean Satisfaction score for parents was 92.9%, suggesting high parent satisfaction with the intervention content, delivery method, and alliance with therapist. When asked if they would recommend the program to a friend, 100% of parents responded affirmatively.</p>

			<p>repetition of key concepts.</p> <p>III. Child/Youth + parent</p> <p>IV. Child/youth + parents</p>		
<p>Ingersoll et al., 2015; 2017</p> <p>USA</p> <p>RCT</p> <p>PE德罗 score: 5/10</p> <p>Fair quality</p>	<p>N= 162</p> <p>Parents of a child with ASD who self-enrolled</p> <p>Child mean age: 4.56 ± 1.72 yrs</p> <p>Child age range: 1.58-12.67 yrs</p> <p>Child gender: 131M:31F</p> <p>Parent gender: 23M:139F</p>	<p>Open trial group (n=112)</p> <p>Controlled trial group (n=50); enrolled in pilot (n=27) or full-scale efficacy trial (n=23)</p> <p>75min/session, 1 session/week, for 12 sessions</p>	<p>I. Child language level, adaptive behavior</p> <p>II. Open trial group: Information about the open trial was disseminated via flyers given to families by professionals at community organizations serving children with ASD, websites providing information about ASD, and an Internet search. Community organizations who expressed interest were given recruitment materials with a unique site code which participants entered at the time of program registration to track referrals. Recruitment materials provided a link to the ImPACT Online website. The website described the content of the program, system requirements, research requirements, and allowed visitors to view a brief video demonstration of the program.</p> <p>Controlled trial group:</p>	<p>Self-directed: Passive web</p> <p>Therapist assisted: web + videoconferencing</p>	<p><b>At follow up (6 months):</b></p> <p>(+) <i>Program engagement: Electronic tracking of user behavior</i></p> <p>(+) <i>Parent intervention knowledge: 20-item multiple-choice quiz*</i></p> <p><i>*significantly associated with program engagement.</i></p>

			<p>Information about the pilot and subsequent full-scale efficacy trials was disseminated via community providers to families within 3 hours of the research lab. Interested parents were directed to contact the research lab to learn more about the specific study. After intake assessments, pilot study participants were randomly assigned to a self-directed (n=13) or therapist-assisted group (n=14). Participants in the full-scale study were randomly assigned to a self-directed (n=6), therapist-assisted (n=8), or informational control group (n=9).</p> <p>ImPACT content includes slideshows, a manual, self-check questions and answers, exercises in the form of brief video clips of intervention techniques, homework, and reflection. Users also had the access to supplemental components such as a video library of adults using intervention techniques, a forum to share info with other participants, additional</p>
